

1. Measure the height of your door to work out how much you need to extend the pet door.
2. Get a piece of "16mm white melamine" from "Bunnings" or any hardware store that will match in look and size Portable pet door panel and cut it according to your measurement.
3. Take of the plastic moldings from the Portable pet door.
4. Drill 3 holes at the top of the Portable pet door. Drill diameter should be chosen to fit timber dowels.
5. Drill 3 holes in extension piece of melamine. The holes should correspond to the holes drilled previously into Portable pet door.  
This can prove to be tricky part so if you are not "handy person" ask someone to do it for you.
6. Put timber glue into each hole , put timber dowels into holes and connect extension on top of the Portable pet door.
7. Put back plastic molding.
